

1. Student information

2. Basic calculator

The screenshot shows the Programiz C# Online Compiler interface. The main editor contains a C# program that prompts the user to enter width and length, calculates the area, and prints the result. The output window shows the program's execution with the following values: Width: 4, Length: 3, Area: 12. The program is titled 'Main.cs' and includes a 'Run' button. The output window also displays '=== Code Execution Successful ==='.

```
// Online C# Editor for free
// Write, Edit and Run your C# code using C# Online Compiler

using System;

public class HelloWorld
{
    public static void Main(string[] args)
    {
        Console.WriteLine ("Width: ");
        double width = Convert.ToDouble(Console.ReadLine());

        Console.WriteLine ("Length: ");
        double length = Convert.ToDouble(Console.ReadLine());

        double area = length * width;
        Console.WriteLine ("Area: " + area);
    }
}
```

Width:
4
Length:
3
Area: 12

=== Code Execution Successful ===

3. Area of a rectangle

The screenshot shows the Programiz C# Online Compiler interface. The main editor contains a C# program that prompts the user to enter three grades, calculates the average, and prints the result. The output window shows the program's execution with the following values: Enter grade 1: 89, Enter grade 2: 99, Enter grade 3: 97, Average: 95. The program is titled 'Main.cs' and includes a 'Run' button. The output window also displays '=== Code Execution Successful ==='.

```
// Online C# Editor for free
// Write, Edit and Run your C# code using C# Online Compiler

using System;

public class HelloWorld
{
    public static void Main(string[] args)
    {
        Console.Write("Enter grade 1: ");
        double grade1 = Convert.ToDouble(Console.ReadLine());

        Console.Write("Enter grade 2: ");
        double grade2 = Convert.ToDouble(Console.ReadLine());

        Console.Write("Enter grade 3: ");
        double grade3 = Convert.ToDouble(Console.ReadLine());

        double total = grade1 + grade2 + grade3;
        double average = total / 3.0;

        Console.WriteLine("Average: " + average);
    }
}
```

Enter grade 1: 89
Enter grade 2: 99
Enter grade 3: 97
Average: 95

=== Code Execution Successful ===

4. Student Grade

```
1 using System;
2
3 public class HelloWorld
4 {
5     public static void Main(string[] args)
6     {
7         Console.WriteLine("Are you a Student? (true/false): ");
8         string input = Console.ReadLine();
9
10        if (bool.TryParse(input, out bool result))
11        {
12            Console.WriteLine($"You are a student!: {result}");
13        }
14        else
15        {
16            Console.WriteLine("Error! Type 'true' or 'false'.");
17        }
18    }
19 }
20
21
22
23 }
```

Output

```
Are you a Student? (true/false): true
You are a student!: True

=== Code Execution Successful ===
```

5. Boolean Input

```
1 using System;
2
3 class HelloWorld
4 {
5     public static void Main(string[] args)
6     {
7         Console.WriteLine("Enter your age: ");
8         string input = Console.ReadLine();
9
10        int age = int.Parse(input);
11
12        bool isAdult = age >= 18;
13
14        if (isAdult)
15        {
16            Console.WriteLine("You are an adult.");
17        }
18        else
19        {
20            Console.WriteLine("You are a minor.");
21        }
22    }
23 }
24 }
```

Output

```
Enter your age:
You are a minor.

=== Code Execution Successful ===
```

6. Age verification

The image shows a screenshot of a C# development environment. On the left, a sidebar contains icons for various tools and a file explorer. The main editor window displays a C# file named 'Main.cs' with the following code:

```
1 using System;
2
3 public class HelloWorld
4 {
5     static void Main(string[] args)
6     {
7
8         Console.Write("What is your First name? : ");
9         string firstName = Console.ReadLine ();
10
11
12         Console.Write("What is your Last name? : ");
13         string lastName = Console.ReadLine ();
14
15
16         string fullName = firstName + lastName;
17         Console.WriteLine(fullName);
18     }
19 }
```

A blue 'Run' button is located at the top right of the code editor. To the right of the code editor is an 'Output' window. It displays the program's execution results:

```
What is your First name? : Alexa
What is your Last name? : Rayo
Alexa Rayo

=== Code Execution Successful ===
```

7. Full name

```
1 using System;
2
3 public class HelloWorld
4 {
5     static void Main(string[] args)
6     {
7
8         Console.Write("Product name: ");
9         string product = Console.ReadLine ();
10
11
12         Console.Write("Product price: ");
13         double price = Convert.ToDouble(Console.ReadLine());
14
15         Console.Write("Quantity: ");
16         double quantity = Convert.ToDouble(Console.ReadLine());
17
18         double total = price * quantity;
19
20         Console.WriteLine("Total product price for: " +
21             product);
22         Console.WriteLine(total);
23     }
24 }
```

Output

Product name: Apple
Product price: 3.99
Quantity: 4
Total product price for: Apple
15.96

=== Code Execution Successful ===

8. Shopping Calculator

```
1 using System;
2
3 public class HelloWorld
4 {
5     static void Main(string[] args)
6     {
7
8         Console.Write("Employee name: ");
9         string name = Console.ReadLine ();
10
11         Console.Write("Hours worked: ");
12         int hours = Convert.ToInt32(Console.ReadLine());
13
14         Console.Write("Hourly Rate: ");
15         double hourlyRate = Convert.ToDouble(Console.ReadLine());
16
17         double salary = hours * hourlyRate;
18
19         Console.WriteLine(name);
20         Console.WriteLine("Your Salary is: " + salary);
21     }
22 }
23
24
```

Output

Employee name: Alexa
Hours worked: 8
Hourly Rate: 14
Alexa
Your Salary is: 112

=== Code Execution Successful ===

9. Salary Calculator

```
1 using System;
2
3 public class HelloWorld
4 {
5     public static void Main(string[] args)
6     {
7
8         Console.Write("Student name: ");
9         string name = Console.ReadLine ();
10
11        Console.Write("Course: ");
12        string course = Console.ReadLine ();
13
14        Console.Write("Age: ");
15        int age = Convert.ToInt32(Console.ReadLine());
16
17        Console.Write("Year Level: ");
18        int yearLevel = Convert.ToInt32(Console.ReadLine());
19
20
21        Console.Write("Enter grade 1: ");
22        double grade1 = Convert.ToDouble(Console.ReadLine());
23
24        Console.Write("Enter grade 2: ");
25        double grade2 = Convert.ToDouble(Console.ReadLine());
26
27        Console.Write("Enter grade 3: ");
28        double grade3 = Convert.ToDouble(Console.ReadLine());
29
30        double total = grade1 + grade2 + grade3;
31        double average = total / 3.0;
32
33        Console.WriteLine("Average: " + average);
34
35        if (age >= 18)
36        {
37            Console.WriteLine("You are older than 18.");
38        }
39        else
40        {
41            Console.WriteLine("You are under 18.");
42        }
43    }
44
45 }
46 }
```

Output

```
Student name: Alexa
Course: BFIS
Age: 19
Year Level: 2
Enter grade 1: 91
Enter grade 2: 87
Enter grade 3: 96
Average: 91.33333333333333
You are older than 18.

=== Code Execution Successful ===
```
